# How to strap with POLYPROPYLENE STRAPPING

# HELPFUL TIPS

## YOU NEED **STRAPPING ROLL**

- Strapping made of polypropylene is versatile and affordable.
- Ideal for light to medium-duty packages and loads in factories and warehouses.
- Due to its lighter weight than steel, polypropylene straps are more easy, secure, and affordable to use.
- Available in 1/2", 5/8", 3/4" strap widths.

# HELPFUL TIPS

## TENSION

- When strapping a load, start by encircling the package with both strapping ends.
- The strapping should be layered with the end close to your body just on bottom.
- Next, press the base handle and tension lever together.
- Allow 5" of strapping at the front of the tool then insert the bottom strap under the gripper plate cutter wheel.
- Feed the upper strap through the cutter wheel after releasing the base and tension lever and through the windlass slot, tighten the strapping as much as you can.
- Continue tensioning the strapping to the desired level by moving the tension lever back and forth.

**SEAL**

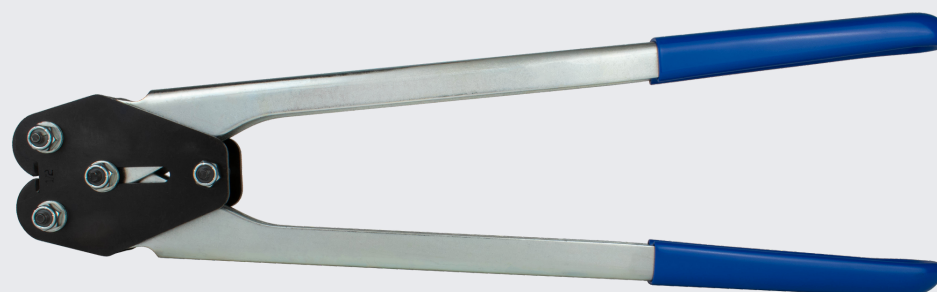

FPS-48L  
STANDARD DUTY

- Place the open seals over both strapping ends, positioning the seal with the open side down.
- Close the sealer's nose around the seal and crimp the strapping tightly .
- To cut the strapping, press the tension lever and base handle together, then slide the tensioning tool to the right.
